

Advantages and disadvantages of extreme programming :

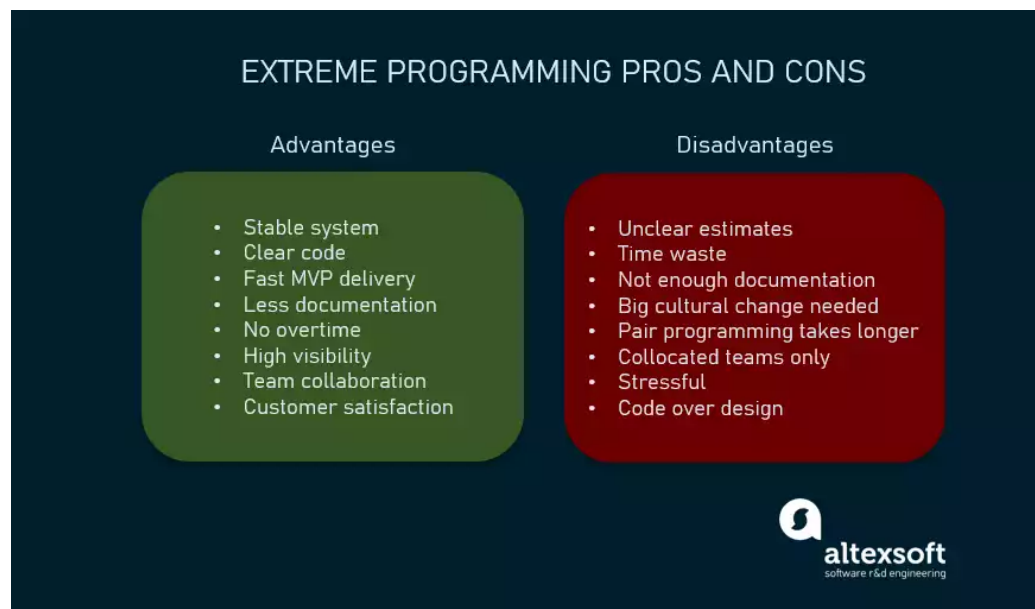

Extreme Programming has the shortest iterative cycles among other Agile methodologies. That is why XP developers have invented lots of new practices like pair programming and planning game to raise the productivity of their work.

Now, let's describe its advantages and disadvantages.

The main advantage of Extreme Programming is that this methodology allows software development companies to save costs and time required for project realization.

Simplicity : the XP developers create extremely simple code that can be improved at any moment.

Constant feedback is also the strong side. It is necessary to listen and make any changes needed in time.
